

- Remote assistance via two-way video
- Situational awareness (temp/gas/LEL/health)
- Emergency response in less than 0.5 seconds
- Employee tracking
- Review emergencies

## BCom Sentinel

Sentinel provides **real-time information** on **employee locations worldwide**.

The Sentinel operator receives instant notifications of emergencies with both visual and audio cues. With a single click, Sentinel zooms to the area of interest and displays the nature of the emergency, such as **Man Down** (impact/non-movement/manual alert), gas alert or Lower Explosion Limit (LEL) danger.

The time to on-scene emergency response is effectively reduced to less than 0.5 seconds.

## Extensions

Sentinel relies on the **Rough Pro SM14 smartphone** or **TB14 tablet** and can be extended with **MSA's A5X multi-gas detector**.

**BCom's Sentinel** unified solution offers you the most cost effective way to provide employee remote support, safety, swift and effective emergency response, and real-time information gathering.
